

Allergy Relief Laundry Treatment has been proven effective in denaturing the protein allergens from dust mite droppings (Der p1 and Der f1), cockroach droppings (Bla g1), dog dander (Can f1), and cat saliva (Fel d1). Allergy Relief Laundry Treatment is a water-based solution that contains a powerful active ingredient derived from naturally occurring extracts found in certain fruit and vegetable seeds. It works by denaturing the structure of the allergen, and thus, substantially reducing the Ige antibody-binding capacity of the allergen. As a result, they are no longer "recognized" by the body's immune system, alleviating the body's allergic response (allergy attack). Designed specifically for use in washing machines. Hypoallergenic, non-toxic, and readily biodegradable. Does not contain pesticides, perfumes, solvents, VOCs, or other hazardous ingredients.

Allergy Relief Laundry Treatment is also available for the consumer to be used at home when laundering bed linens. Ask us about purchasing this great product.

Instructions:

For wet-cleanable sheets, linens, blankets, comforters, pillowcases, and pillows, introduce Allergy Relief Laundry Treatment into the final laundry rinse cycle at the ratio of one cup per load. The residual treatment will remain effective for up to four subsequent machine washings. Weekly laundering and treatment is recommended to maximize effectiveness and minimize symptoms.
